

TIMBER PRE CLEAN

PRODUCT INFORMATION SHEET

DESCRIPTION:

Timber Pre Clean is formulated for the specific task of removal of body fats, ingrained dirt and greasy residue from timber floors prior to refurbishment with Peerless Timber Seals.

Timber Pre Clean must be used as the cleaner prior to refurbishments on all timber floors to be coated with Peerless timber seals, unless the floor has been treated with wax, polish or sealer finish, in which case Peerless All Purpose Stripper should be used in accordance with label directions.

Timber Pre Clean will emulsify body fats, ingrained soil and allow the cleaning process to prepare the floor for cut back with screen disks. The complete removal of soil and in particular body fats is crucial to a successful refurbishment program. Failure to carefully preclean prior to cut back can cause loss of adhesion and delamination of seal.

FEATURES AND BENEFITS:

- Excellent emulsification properties.
- Economical in use.
- Inbuilt water softener- May be used in hard water.

TECHNICAL INFORMATION:

Appearance	Blue Liquid
Odour	Slight Alcoholic
Specific Gravity	1.03 at 25 Deg C
pH	9.0-10.0
Solubility in Water	Complete

USE:

Dilute 1 part Timber Pre-clean with 10 parts water. Apply to floor surface and scrub. The most effective method to scrub the floor is with an automatic scrubbing machine. If an automatic scrubber is not available mix the solution in a bucket, apply to floor with a cotton mop and scrub the floor with a single brush polishing machine equipment with a nylon scrubbing pad. Pick up the soiled solution with a clean mop or wet and dry vacuum. Finally, rinse the floor with clean water. Continue this operation until the entire floor surface has been scrubbed, picked up and rinsed with clear water.

Particular emphasis should be paid to areas of the floor where high density activity occurs and the possibility of perspiration being in contact is greater, eg. Keyways, Team bench areas, etc.

SAFETY: Causes serious eye irritation.

Keep out of reach of children. Read label before use. Wash hands, face and all exposed skin thoroughly after handling. Wear protective clothing, gloves and eye/face protection.
